It works everywhere Not just mac Trust today that you are programming on my Mac and tomorrow you may have to program debugger in another environment.. Using a text editor I have no tolerance for inertia and I have not found a GUI text editor that is as fast as Sublime Text and versatile plugin API has enabled a large plugin community that contains most of the advanced features that you Expect from an IDE without affecting speed.. And for many reasonably fast typewriters including myself you type a name you know is faster than autocomplete.. This is a great site even if you learn to use Python in a browser So do not forget to continue creating programs in the text editing app and run them for real in Terminal.

The benefits of Spacemacs can compensate for the basic difficulties with Emacs This means that in addition to Emacs you must learn more new features and modes.. Although the software is already rich you can install thousands of open source packages to add new features and functionality for more features.
